

Maximize servo benefits by reducing slide motion waste.

- Slide motion (from actual operation)
- Touch speed
- Maximum loading point
- Monitors precise touch points
- End of forming process

The **Visual Inspection System (VIS)** allows you to **monitor** slide position, speed, load in tons, working energy, and other press parameters.

Exact digital data removes the guesswork—no more intuition or trial and error. Seeing exactly what's happening in the press cycle allows you to optimize the press motion and speed to match your application, improving throughput and quality.

The **Visual Inspection System**, combined with patented **Servo Technology**, provides you with the optimum solution—only from Komatsu.

Monitor slide motion and velocity right from your laptop or PC!
